

The excursion to the meteorite crater area of Söderfjärden gathered over 60 participants. Information about the area was available at the Meteorita exhibition, through a film about the meteor impact and its effects until modern days and also by guides Margareta Blomfeldt and Henrik Fågelbärj. Experienced birdwatcher Ari Lähteenpää gave an insight into the birdlife in the area, especially concentrating on the cranes that rest at Söderfjärden at this time of the year before moving south for the winter months. A warm thanks to Margareta, Ari and Henrik for excellent guiding and to all participants for joining!
